What, Who, How and Why

WHAT IS THE IDEA?

An app to reserve and pay for in
building laundry machine

ΛΛAnAn a

WHO NEEDS IT?

Apartment tenants (convenience) &
Building managers (revenue & insight)

**WHY WILL an investor WANT
TO Invest in YOUR APPs, or your
Data, or business**

recurring SaaS fees per buildings and usage data

Revenue Model: How We Scale

Developer Revenue Streams

- **Monthly/Annual SaaS Fee:** Subscription paid by apartment managers for platform access.
- **Transaction Fees:** Small percentage commission on every booking cycle.
- **Premium Analytics:** Upsell reporting on usage trends and maintenance.

Client (Landlord) Value

- **Fee Collection:** Automated collection of laundry fees from tenants.
- **Pricing Control:** Dynamic machine pricing based on building needs.
- **Operational Insight:** Detailed maintenance and revenue dashboards.

Example: Revenue Split for a \$3.00 Laundry Cycle

Landlord Earns

\$2.85

(95% share)

App Developer Fee

\$0.15

(Transaction Fee)

User Journey: How it Works (Tenants)

Step 1

Tenant creates an account and logs in to the system.

Step 2

Tenant examines available washers and dryers in the building.

Step 3

Tenant selects a machine and books a specific time slot.

Step 4

Tenant confirmed reservation and pays. Notifications sent for unavailability.

Step 5

Tenant uses machine. Canceled slots are freed for other users.

User Journey: How it Works (Managers/Admin)

Step 1

Manager logs in and selects their apartment building.

Step 2

Manager adds washers and dryers, including machine type and status.

Step 3

Manager sets prices, cycle durations, and available booking hours.

Step 4

Manager monitors reservation, machine availability, and any maintenance issues.

Step 5

Manager views revenue reports, booking history, and exports data for record keeping.

The Data

(2NF Relational Data Model)

Normalized to 2NF using primary and foreign key relationships.
